

Internet of Things:-

Problem Statement:- 2

Automate YouTube / Smart Challenge.

New video being uploaded by Intership studio on their channel (because there multiple people to upload the video) and list all of them for sales team in an excel sheet again.

sol. As per previous project we are using same process.

The Online platform called ifttt

In this we can find two layer

The first

If this

+

Then that

In every first we need to create applet to get trigger the notification.

In 2nd this step we have to
choice youtube and need to
give an ID of particular channel
on which we on which we need
get notification and

Then next step is that
In this we have choice gmail
and then we have two choice
like "send an email to yourself"
and "send an mail" we can
can choice any of them

Then later just click on
creat trigger and finish it

That the way we be notified
to your mail.
