## Problem Statement - 4

Daily Scrum : Github Automation

Aman who is working as a software developer is leading the team and wants to send out emails to all the developers under him when ever there is any changes in the Github Repository

Sol: The online Platform we use is 'IFTTT'

In If this step we need to select Github and we need to give some Repository to that

second step In then that we need to select a mail and we get any mails it we

well notification we are for our  
mail.
